DETAILED ACTION

Claim Rejections - 35 USC § 112

Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The use of the trademark ACETAL® has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-30 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Iwasaki et al.

Iwasaki et al. discloses a housing, with a top opening, a plucking head with a longitudinal axis, and a series of stretcher ribs (34, 35, 37) that vibrate along with the device to provide comfort to the user that correspond to the vibration unit of the instant invention.

The plucking head comprises a series of pinching plates (discs) of an arcuate configuration arranged along the longitudinal axis. The fixed pinching plates are integral to a carrier 41(fixed with respect to one another). Mounted on the carrier are movable pinching plates (discs) which are composed of first and second plates 44a, 44b, which are rotatable together with the carrier and the fixed plates. The first and second plates are formed at their ends with a pair of spaced anchor legs 46a, and a single anchor leg 46b which are press fitted to corresponding notches 51a and 51b formed in the sliders 50a, 50b, which are U-shaped (claims 11-15). The plates are in multiple rows, adjacent to each other, identical to each other, and parallel as recited. The fixed plates and movable plates correspond to the internal disc assembly and outer disc assembly as recited in claims 9 and 10.

The vibration unit comprises skin contacting ribs shown in various arrangements adjacent to the plucking head, in multiple rows, between the plates, and they are all driven by the same motor that drives the device (claims 20-29).
